

# SSI Medibis – Use IE Mode in Edge

## Internet Explorer Deprecation

Microsoft has announced the feature deprecation of Internet Explorer in the past, and several times delayed implementing the plan. It appears imminent that Internet Explorer will not be renewed in Windows 11 or in some instances of Windows 10.

## IE Mode in Microsoft Edge as a solution

While SSI continues to develop a solution to provide Medibis customers with powerful analytical tools, a temporary solution to the deprecation of IE needs to be addressed.

Microsoft has developed a method of using Chromium Edge in an IE enabled mode for sites that have compatibility issues. This might be disabled in your particular instance by a Group Policy that has been established by your IT group. If you do not see the following option under Settings in Edge, you will need to request help from your IT group to enable it on your computer.

The screenshot shows the Windows Settings application with the 'Default browser' section selected in the left-hand menu. The main content area displays the following settings:

- Default browser:** A toggle switch for 'Make Microsoft Edge your default browser' is turned on, with a 'Make default' button to its right.
- Internet Explorer compatibility:**
  - Let Internet Explorer open sites in Microsoft Edge:** A dropdown menu is set to 'Incompatible sites only (Recommended)'. Below this is a note: 'When browsing in Internet Explorer you can choose to automatically open sites in Microsoft Edge'.
  - Allow sites to be reloaded in Internet Explorer mode:** A dropdown menu is set to 'Allow'. Below this is a note: 'When browsing in Microsoft Edge, if a site requires Internet Explorer for compatibility, you can choose to reload it in Internet Explorer mode'.
  - Internet Explorer mode pages:** A section with an 'Add' button. Below it is a table of pages:

Page	Date added	Expires	
<a href="https://portal.medibis.com/">https://portal.medibis.com/</a>	5/9/2022	6/8/2022	

## Enable IE Mode

Select “Incompatible sites only (Recommended)” from the drop down in the section titled “Let Internet Explorer open sites in Microsoft Edge”

## Allow Sites to be reloaded in Internet Explorer mode

Select “Allow” in the drop down under the section titled “Allow sites to be reloaded in Internet Explorer mode”

## Internet Explorer mode pages

Click the Add button to add the Medibis portal URL to the list of pages.

## Add a page to IE Mode

In this box, enter <https://portal.medibis.com> and click “Add”

Because Microsoft wants to move away from IE Mode, you will need to renew this from time to time. You will see the expiration date in the page. This process can easily be renewed when it expires.
